DEMO SCRIPT

AI service agent demo script (12 minutes)

Aiko Tanaka, Principal Solutions Architect

A customer whose trip was cancelled rebooks in chat, and a refund waits for a person to approve it. Use with the "AI customer service agent" reference architecture.

Flow

MIN	SHOW	SAY
0-3	Ask "what's my baggage allowance?"; the answer streams and quotes policy	"Answers first: no actions until you trust it."
3-6	"My flight was cancelled, get me on the next one"; the agent calls the booking tools	"It acts on the customer's own booking, through your existing APIs."
6-9	Ask for a refund; the Workflow pauses for a staff approval, then completes	"Anything that moves money waits for a person, and survives a slow partner API."
9-12	AI Gateway: spend by feature, the fallback provider, a model swap with no code change	"You control cost and you're never tied to one model."

Discovery questions to ask after

- Which three requests make up most of your contact-centre volume during disruption?
- Which of those already have an API we could call?
- What does a contact cost you today, and what deflection rate would pay for this?
