PLAYBOOK

Migration POV playbook

Sofia Rossi, Senior Solutions Architect

A three-week proof of value that moves one real customer journey onto Vercel behind the existing site, with zero downtime and a rollback the customer controls.

Scope

- One journey with a clear URL boundary and real traffic, such as search or product pages. Not checkout.
- Vercel in front of the production domain, with a fallback rewrite to the legacy origin for everything else.
- A Global Config kill switch for the migrated paths.

Success criteria (agree these in week 0)

MEASURE	TARGET	SOURCE
LCP on the migrated journey (p75)	At least 30% faster	Speed Insights
Cache hit ratio on the migrated paths	Above 85%	Observability
Deploys to production	Daily, with previews per PR	Deployments
Downtime during cutover	None	Customer monitoring

Timeline

WEEK	WHAT HAPPENS
0	Pick the journey, agree success criteria, get DNS and CDN access
1	Domain on Vercel, fallback rewrite live, all traffic still served by legacy
2	Journey rebuilt in Next.js; shipped to 5% with Rolling Releases
3	Ramp to 100%, readout against the success criteria with the CTO

Watch-outs

- Sessions don't cross domains: move sessions to a shared store before week 2.
- Rewrites are limited to 1,024 routes per deployment; use middleware beyond that.
- Keep URLs, canonicals and redirects identical so SEO doesn't move.

SA Team Hub demo asset library. People and customers are fictional.
